Summary of the assembly

OSR Dir. Leo Lugmayr

Valuable exchange of information and experience about the situation of blacksmiths in Austria, the cultural heritage "Forges in Ybbsitz", the cultural and natural area of the Schmiedemeile, the need for protection for workshops, barrages, riparian zones and road infrastructure as well as flood protection in harmony with the cultural and natural heritage of a grown Ensemble.

Discussion of energy-efficient induction heating of wrought iron as an alternative to polluting coal fires as well as opportunities for internal networking through the works platform forumferrum.com.

In the future, different arts related to iron and metalworking will also be discussed.
